

Apple iPad **Wired** LG TV Display.

This description is specific to the Calendar House LG television set-up and may not work with other systems.

- 1) Note that a digital AV adapter with a connecting plug appropriate for the iPad version is required to connect to the TV HDMI cable.

- 2) Connect the TV HDMI cable to the AV adapter and plug the adapter cable into the iPad. Then connect the powered iPad charging cable to the AV adapter.

- 3) Turn on the LG television and the iPad. Wait for both to start up.
- 4) Use the LG TV remote and click the button at the top right. A list of connection options will appear. Use the LG remote arrow keys to scroll to the HDMI¹ option and then click the “OK” button.

- 5) The iPad screen details should now be visible on the TV. Try rotating the iPad to landscape mode as it may provide a better view of the iPad screen details for your presentation.
- 6) All the normal iPad facilities will be available for your presentation and all screen changes will be copied to the TV reasonably quickly. When you have finished your presentation, turn off the TV and the iPad and disconnect all the cables.
